Heat Waves

Havells has ventured into home comfort products with the new generation, electric water heaters. These heaters come with energy efficiency and water flow control features, and can fit into almost any space. The heaters can sustain high pressure of up to eight bars, making it compatible in high-rise buildings and have glass-lined inner tanks which prevent rust and corrosion. Havells water heaters come fitted with RCCBs (Residual Current Circuit Breakers) that disconnect the electric supply to the heater in case of faulty wiring. The five water heater variants, GERO, BELLO, PURO, MONZA and FINO come with a capacity ranging from 10l to 35l. Starts at ₹7,000.
